 Employer: \_\_\_\_\_ Position Title: \_\_\_\_\_  
 Please select **one or more** specialty/disciplinary areas.

- Food Safety
- Public Health
- Epidemiology
- Other: \_\_\_\_\_

Please describe the objectives of a veterinarian meeting this shortage situation as well as being located in the community, area, state/insular area, or position requested above (limit your response to 200 words or less).

There are 166,000 beef cattle, 60,000 beef cows, 300 sows, and 2,500 sheep and goats in this rural area of 40,000 people. There are 1,500 farms and ranches in the area. The objectives of a veterinarian in this area will be to provide service to the livestock producers in the area as well as provide needed services to companion animals and equines. A veterinarian is expected to devote at least 60% of his/her time to practicing food animal medicine. There are four veterinarians in the area who do some food animal work. All of them do some companion animal and equine work as well. Only two of the veterinarians do a significant amount of food animal work. The successful applicant for this position must be willing to become a part of the community and work with youth organizations such as 4-H and FFA.

Please describe the activities of a veterinarian meeting this shortage situation and being located in the community, area, state/insular area, or position requested above (limit your response to 200 words or less).

This county consists of mostly cow/calf and stocker beef operations. The food animal medicine is steady year around with peak activity in the fall and spring. Most of the swine work is with show swine and show swine breeding operations. Small ruminants are a significant portion of the food animal population. There are several small poultry operations that require some veterinary service. There are needs for equine, exotics, and companion animals in the area and this person is expected to help fill those needs. This is a large area a veterinarian doing food animal work will be required to do some mobile work.

Please describe any past efforts to recruit and retain a veterinarian in the shortage situation identified above (limit your response to 100 words or less).

Two of the veterinarians in the area did a significant amount of food animal work in the past but due to age they have become more involved in companion animal practice. One of the veterinarians does only companion animal and equine work. There is a population center of approximately 35,000 people within 25 miles in one direction and Tulsa with approximately 380,000 people is 55 miles away to provide opportunities for dining and entertainment. There are several veterinarians in those centers to provide mentoring to a young veterinarian in this county.

Please describe the risk of this veterinarian position not being secured or retained. Include the risk(s) to the production of a safe and wholesome food supply and to animal, human, and environmental health not only in the community but in the region, state/insular area, nation, and/or international community (limit your response to 250 words or less).

The initial consequence of the position not being filled is that the livestock population and the producers will be underserved. General herd health will suffer and producers will have a more difficult time being profitable. Producers will have to transport their animals farther or pay more to have out of the area veterinarians to come to their premise. More far reaching and potentially more dangerous consequences are not having a veterinarian in the local area as the first line of defense to diagnose and report foreign animal diseases and/or zoonotic diseases that could have a detrimental impact on the health and economy of the area and possibly the entire state and the nation. A practicing veterinarian in local areas is a point of contact for state and federal animal health officials and is a valuable liaison between animal health officials and the livestock producers.

Please indicate whether you consider this situation/position a candidate for a "service in emergency" agreement (limit your response to 100 words or less). Please see solicitations for additional information regarding the obligation of participants who enter into the "Service in Emergency" agreement.

Authorized State or Insular Area Animal Health Official or designee:

Name: Rod Hall, DVM  
Oklahoma State Veterinarian

Title: \_\_\_\_\_

Organization: Oklahoma Department of Agriculture, Food and Forestry
